projects

On-Time (In Development) - An Android app that allows users to set alarms, it then analyzes traffic and weather data to move the alarm to an earlier time if needed, ensuring the user arrives on time

Website Portfolio - A portfolio website built from scratch using HTML and CSS with a focus on front-end and responsive design, and overall user experience

Instagram Analytics - A Python program that gathers user's post and follower data from Instagram using the Selenium API and outputs to a .json file

Activity Extractor - Developed during Google Code-In 2016, a Python program to gather user's viewing activity from popular streaming sites using Selenium
